

TECHNICAL DATA SHEET

TOPS DP-02

Dispersing Agent

TOPS DP-02 (sodium polyacrylate dispersant) is used to disperse both pigments and fillers and to produce stable slurries, such as compounds in the carpets industry and mixtures used for paper coating.

The advantages of TOPS DP-02 are low viscosity, small particle size, and ameliorated viscostability.

Typical Properties

Appearance	Yellow – brown viscous liquid
Polymer Type	Sodium - polyacrylate
Emulsifying System	Nonionic / anionic
Brookfield Viscosity (RVT #3/10 rpm, 27°C)	max. 2,000 mPa.s
Total Solids Content	43.0 +/- 1.0 %
pH	8.0 - 9.0
